

## ECOUTE #12

### *Safe energies.*

So, I'm commenting on safe energy for a safe world. And I guess what I think about Australia, I think about mining in Australia, which has been quite good for our economy. However, as far as sustaining nature in Australia and the life support systems, it probably isn't such a positive influence on the country. So basically in Australia, in WA, Western Australia, they mine iron and gas and in Queensland they mine coal. So it has opened up a lot of job opportunities for people in the country. However, there are sources that need protection in our country such as the minerals that are being mined. They just are at stake. So, on the one hand, it helps out the people of Australia make the living for themselves but really to have a safe energy for mining is probably not the best option. What we need in Australia is safe, clean and sustainable energy. This is what I believe and probably what quite a few people do, in Australia, believe.

\*safe : sûr

\*the support : le soutien, le support, la subvention

-> to support : soutenir, supporter, subventionner

\*iron : le fer

\*coal : le charbon

\*to be at stake : être en jeu
